13. IMPLEMENT OWN PING PROGRAM

Aim:

To implement my own ping program

Code:

```
import os
import platform
import subprocess
def ping(host="google.com", count=4):
    param = "-n" if platform.system().lower()
                == "windows" else "-c"
    command = ["ping", param, str(count), host]
    try:
        output = subprocess.check_output(command,
                universal_newlines=True)
        print(output)
    except Exception as e:
        print(f"Ping failed: {e}")

if __name__ == "__main__"
    ping("8.8.8.8")
```

Output:

```
Pinging 8.8.8.8 with 32 bytes of data
Replying from 8.8.8.8: bytes=32 time=6ms TTL=119
Reply from 8.8.8.8 : bytes=32 time=9ms TTL=119
Reply from 8.8.8.8 : bytes=32 time=5ms TTL=119
Reply from 8.8.8.8 bytes, 32 time=9ms TTL=119
```

Ping statistics for 8.8.8.8

Packets : sent = 4 Received = 4 Lost = 0 (0% loss)

Approximate round trip times in milli-second :

Minimum = 5ms, Maximum = 9ms, Average = 7ms

Result :

Thus the ping program is written and executed successfully.
