Exp 5 : Packet tracer tool Installation & User Interface Overview

Aim:

To study the packet tracer tool installation and User Interface overview.

Installing packet Tracer:

Windows:

Set up comes in single file named "PacketTracer – Setup 6.0.1.exe". Open the file, accept the License, select location and start your installation.

Procedure:

step 1: In the bottom tool bar select end device and drag and drop 4 systems

step 2: from bottom tool bar, select hub / switch based on experiment and place in the centre of all systems.

step 3: Connect all the systems to hub / switch using copper straight wire.

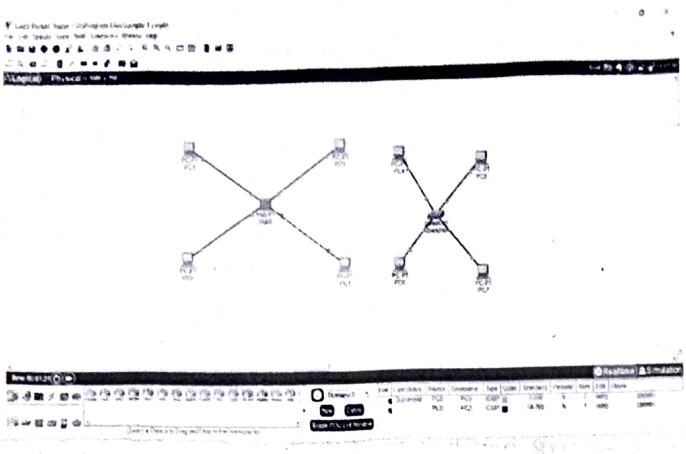

step 4: set ip address to each system in the connection

Select System → desktop → ip configuration

step 5: select data packet and drag and drop to source and destination systems

step 6: change real time → simulation mode and autoplay and observe the flow of packet

Output:

Result:

Thus the packet tracer is installed successfully and the user interface is overviewed successfully.
